Work Experience:

- Apttus (fulltime) Frontend Web Developer - September 2018 - present
 - Created Angular 7 modules, services and components using Angular 7 best practices.
 - Heavy use of RxJS Observables for creating asynchronous api callouts / service methods.
 - Built new features for an ecommerce SDK that functioned on a Salesforce platform.
 - Maintained proper js docs style documentation for all new features added to code base.
 - Conducted pull request code reviews for contract/offshore employees.
- Apttus (temp/contract) Design Technologist - March, 2018 - September, 2018
 - Owner of the companies design system that gets consumed by all platform applications.
 - Upgrade existing design system from a collection of SCSS classes to a robust platform that exports reusable AngularJS components, SVGs, fonts and SCSS classes.
 - Integrate new AngularJS components into existing codebase and test for errors.

- Act as liaison between UX and engineering to translate pixel perfect designs to working code.
 - Maintain design guide documentation web app with demos and example code.
- Union Bank (temp/contract) Fraud Analyst - November, 2017 - February, 2017
 - Worked in a multi-functional team and assisted with company goals.
 - Wrote Javascript application for assisting with notating accounts. Tested application amongst peers and found that it improved consistency, increased speed, and prevented mistakes for each user. <https://amcnulty.github.io/NoteHelperWeb/>
- Front end Web Developer (contractor) GradSpecs LLC - January, 2015 - May, 2017
 - Translated mock-up designs to workable code using HTML5, CSS3, Javascript, JQuery, Bootstrap, AngularJS.
 - Created Front-End code that is cross browser compatible and mobile responsive.
 - Followed current web standards for UI/UX design to make clean front end applications.
 - Mobile application development using Cordova/PhoneGap to build hybrid apps.
 - Followed agile development methodologies during software development life cycle.
- Freelance Web Developer (Sole Proprietor) - 2015 - present
 - Ability to understand client's needs and translate them into a range of software solutions. This included optional upgrades and maintenance options for recurring revenue.
 - Designed, built and maintain website for commercial business www.contractorsgarage.net
 - Estimated time frames for the client to manage development time under specific deadlines.
 - Created a custom design for client's website to highlight key points of their business.
- CEO at Stars and Stripes General Contracting - February, 2016 - May, 2017
 - Started construction/landscaping business from ground up as a proof of concept model.
 - Turned company into a profitable business by overcoming start-up costs within first four months of operation.
 - Created company custom website using latest core web technologies which was used to advertise, build the company brand, work as a point of contact, and generate bids and leads for the business. <https://amcnulty.github.io/SSGC/>
 - Personally ran the company's finances, marketing strategy, customer acquisition and retention, website, employee hiring/training, and operations.
- NBH Bank, Bank Midwest Teller - October, 2013 - April, 2015
 - Created a custom Java RPG for a fun way to track teller sales and generate friendly competition. The game was very well received and offered an alternative way to track referrals in a unique way.
 - Attention to detail while working resulting in zero cash differences during entire employment.

Objective:

To obtain a web development position at an enterprise level company and use my educational qualifications gained at UCSD Extension along with my current experience as a freelance web developer.

Education/Training:

University of California San Diego Extension - Certificate of completion 2018

- Full Stack Developer Coding Bootcamp for Web Technologies
 - Scored A+ on all assignments and projects.
 - Helped coach/tutor other students in the class.
